

The quality of your tags directly affect your sales. Please read on to ensure successful scanning of your tags:

1.PLEASE DO NOT TAPE OVER BARCODES

2.Use **WHITE cardstock** (60-67 LB) and **black ink**.

3.Clean your printer's print heads.

4.Don't print too dark or on the "High Quality" setting, print on the "Normal Setting"

5.Align your print cartridges (especially when changing cartridges)

6.Don't use designer cardstock (too fibrous) or cardstock with a "slick" surface

7.Select one of the "Print Tags" options, and be sure to turn off any popup blocker you may have running. When you generate tags they pop up in a new window.

8.If your tags are smeared, please reprint since they will not scan and will **NOT** be accepted at the sale.

9.If you change **ANY** information on your tags after printing a tag, you **MUST** reprint tag. Tags may **NOT** have handwritten changes.
